EDUCATION

MCMASTER UNIVERSITY

B.ENG MECHATRONICS ENGINEERING AND MANAGEMENT

Expected April 2027

Richmond Hill, ON

GPA: 3.8

Men's Varsity Soccer (2021)

Enactus McMaster

McMaster Intramurals (Soccer, Basketball, Flag Football, Water Polo)

BILL CROTHERS SS

Diploma 2021 - Markham, ON

French Bilingual Certificate

Pascal Waterloo Math Contest Distinction

HOSA Medical Innovation 2nd Place

Student Council (2020, 2021)

COURSEWORK

SOFTWARE

Data Structures & Algorithms

Object Oriented Programming

Advanced C/C++ Programming

Machine Learning & Neural Networks

HARDWARE

ASIC Design • Microcontroller Interfacing

Digital Computer Design & Prototyping

SKILLS

PROGRAMMING

Experienced:

Python • SQL • C++ • C • React •

TypeScript/JavaScript

Familiar:

Bash • R • Verilog

ML/DATA

PyTorch • TensorFlow • pandas •

scikit-learn • dbt • Airflow • PostgreSQL

• MySQL • FlinkSQL

TOOLS

Docker • Git/GitHub Actions • MATLAB

EXPERIENCE

SHOPIFY | MACHINE LEARNING ENGINEER INTERN – MERCHANT RISK

May 2026 – Aug 2026 | Toronto, ON

- Owned monitoring for a real-time transaction-level fraud model; migrated and rebuilt its dashboard into the team's primary diagnostic surface, used to triage multiple production incidents.
- Re-architected the core feature pre-auth model pipeline as an incremental dbt model, replacing a full 50-column Airflow reprocess and cutting compute cost from \$40K to \$3K/year.
- Built a batch monitoring dashboard and dbt model for the card cashing fraud detection model, reducing training/serving feature skew across key features.

GTA ROOFING ESTIMATES | Co-FOUNDER

Sept 2025 – Present | Toronto, ON (Remote)

- Co-founded a proptech startup delivering instant, satellite-based roof cost estimates to GTA homeowners, connecting them with vetted contractor partners (100+ leads generated, 80% phone-qualified conversion).
- Designed the backend end-to-end: Supabase (Postgres) with row-level security for lead data, Twilio SMS verification to confirm real homeowners, and n8n orchestration routing verified leads to contractors in real time.
- Architected the full submission-to-live-lead pipeline to run unattended at scale, with zero manual intervention on lead routing.

RBC | TECHNICAL SYSTEMS ANALYST – DATA AND AI TEAM

May 2025 – Aug 2025 | Toronto, ON

- Supported development of RBC's enterprise-wide Safe AI Adoption Platform, enabling responsible onboarding of 500+ AI model/LLM use cases across all lines of business.
- Automated the disaster recovery plan process via autonomous AI (Devin) using a fetched database schema of all running applications and their repo architecture context.

SOFTWARE DEVELOPER INTERN - DEVOPS

May 2024 – April 2025 | Toronto, ON

- Migrated new acquisitions to RBC's internal platforms, scaling microservices and applications to accelerate product delivery lines for 4000+ new developers.
- Developed a scheduled OpenShift service that parses employee credentials from an Elastic database to measure GitHub Copilot activity, removing inactive users via the Chorus API and cutting license costs by \$50K/month.
- Developed a full stack app that fetches hosts, processes, and services per application from Dynatrace for real-time monitoring.

VOLUNTEERING

STUDENT REPRESENTATIVE – RBC

- Responsible for organizing 6+ orientation events within Technology and Operations throughout the summer term.
- Collaborated with senior leaders to organize leadership panels, networking events and mentoring sessions with my fellow peers.

WELCOME WEEK REPRESENTATIVE - MCMASTER

- Helped incoming first-year engineering students with the transition to university through tours around campus, managing/planning events, and hosting fun-filled activities throughout the year.
